DETAILED ACTION

Drawings

1. The drawings are objected to because section lines should be in Arabic or Roman numerals. See figures 1, 6A and 8. Basis for this is in 37 C.F.R. 1.84(h)(3). Additionally, in figure 2, reference character "63" points to two different elements. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

2. The disclosure is objected to because of the following informalities: On page 8, line 24, should "brushes" be --bristles--?

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-31 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. With respect to claim 1, "the discharging port" lacks antecedent basis. With respect to claim 14, "the suction pipe" lacks antecedent basis.

6. These and any other informalities should be corrected so that the claims may particularly point out and distinctly claim the subject matter which applicant regards as the invention, as required by 35 U.S.C. § 112, second paragraph.

Art Unit: 1744

Allowable Subject Matter

7. Claims 1-31, as best understood, would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

8. The following is a statement of reasons for the indication of allowable subject matter:

With respect to claim 1, the prior art does not disclose nor render obvious the claimed combination, particularly an impeller assembly installed at one side of the main case, a filter means positioned in the suction passage for separating foreign materials contained within the suction fluid and a cleaning water tank connected to the discharging port of the impeller assembly in the main case, for storing cleaning water inside.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to McCoy et al., Berfield et al., Bosyj and Japanese patent to Sato et al. show the current state of the art.
